

## ABOUT US:

**Our goal is to Improve the quality of human life and its adaptation to the environment by developing technology solutions taking inspiration from nature.**

[contacto@biomimetikainnovation.com](mailto:contacto@biomimetikainnovation.com)

## OUR OFFER:

Provide cities with a special license to be part of our platform and with the opportunity to have a unique blend of technology, design and architecture, through a “lotus farm” project.

Always looking for the social impact, so, through a Sisters Cities scheme we are going to help undeveloped communities to have access to clean water.

## LOTUS WATER:

A mechanical system for collecting rainwater in the shape of a lotus flower. The device opens when the rain starts and closes when the rain stops. Then the water goes through a filtration and purification process, obtaining safe water. It doesn't require electricity, batteries and does not even have a motor... we are looking for the patent.

## Offices:

Headquarter Office 1750 Finch Ave E, North York, ON M2J 2X5. Toronto, Canada.
